PROFESSIONAL SUMMARY

- **ISTQB-CTFL Certified QA Automation Engineer with 4.6+ years of experience** in Manual and Automation Testing across enterprise Web, Mobile, CRM, and Cloud-based applications.
- Strong expertise in designing, developing, and maintaining **scalable test automation frameworks** using **Playwright, Selenium WebDriver, Cypress, Tricentis Tosca, Java, Python, Postman, and Jenkins**.
- Hands-on experience in **AI-assisted software testing**, including **Generative AI, Prompt Engineering, LLM-based test case generation, AI-driven test data creation, and automation script optimization**.
- Proficient in **Functional, Regression, Smoke, Sanity, API, Integration, System, and End-to-End (E2E) Testing** with a focus on improving test coverage and software quality.
- Experienced in **API automation and validation** using **Postman** and REST APIs, with strong knowledge of request/response validation and JSON payload testing.
- Skilled in **Agile/Scrum methodologies**, collaborating closely with cross-functional teams to ensure timely delivery of high-quality software.
- Strong understanding of **CI/CD pipelines**, integrating automated test suites with **Jenkins** to enable continuous testing and faster release cycles.
- Experienced in **defect lifecycle management**, root cause analysis, test planning, test execution, and quality reporting using industry-standard defect tracking tools.
- Proficient in creating **data-driven, modular, hybrid, and reusable automation frameworks**, improving maintainability and reducing execution time.
- Strong analytical, problem-solving, and communication skills with a proven ability to deliver **high-quality, reliable, and AI-enabled software solutions**.

CORE COMPETENCIES

- Testing Tools: Tricentis Tosca, qTest, Selenium WebDriver, Cypress, Postman, Ready API, Appium Inspector, Appium Server, Playwright
- Frameworks: TestNG, Cucumber, Mocha, Chai
- AI in Testing: AI-assisted Test Case Design, Prompt Engineering, LLM-based Test Automation
- Languages: Core Java, Python, JavaScript
- Version Control / CI-CD: Jenkins, Git, GitHub, GitLab
- Database: MySQL, SQL Query Browser
- Testing Types: Functional, Regression, Smoke, Sanity, System, API Testing, Mobile Testing
- Development Tools: Eclipse, IntelliJ IDEA, PyCharm, Visual Studio Code

PROFESSIONAL EXPERIENCE

Application Engineer – Quadrafort Technologies, Noida (May 2026 - Present)

Client: Indraprastha Gas Limited (IGL)

Project-1: Salesforce CRM Digital Transformation Project

Description: Migrated legacy CRM systems to **Salesforce**, modernizing customer relationship management with cloud-based solutions. Enhanced customer engagement, streamlined sales/service workflows, and enabled data-driven insights to support business growth.

Responsibilities:

- Designed, developed, and maintained a highly scalable automation framework using **Playwright** to validate complex **Salesforce CRM** workflows, efficiently handling dynamic shadow DOM components.
- Designed and executed **functional, regression, integration, and end-to-end** test scenarios for Salesforce CRM applications.
- Developed reusable automation assets and optimized regression test execution for enterprise CRM workflows.
- Utilized AI-assisted tools to generate comprehensive test scenarios, derive edge cases from business requirements, and accelerate test design activities.
- Applied prompt engineering techniques to improve test case generation, documentation quality, and requirement interpretation using **Generative AI**
- Collaborated with Business Analysts, Developers, and Product Owners to prioritize testing requirements during Agile sprint cycles.
- Tested omnichannel customer journeys across Email, SMS, WhatsApp, Customer Portal, and Mobile applications.
- Executed Salesforce Field Service testing covering Work Orders, Scheduling, Technician Mobility, and Inventory Management.
- Participated in sprint planning, backlog refinement, release validation, and continuous quality improvement initiatives.

Environment: Playwright, Salesforce, Appium, AI-assisted Testing, Prompt Engineering, Agile Scrum.

Client: PVR INOX

Project-2: PVR INOX Sales CRM Transformation

Description: PVR INOX's end-to-end advertising sales lifecycle by automating SPANCO opportunity management, customer accounts, DSR activities, proposal and quotation generation, approval workflows, Release Order (RO) processing, and inventory management. The solution streamlined sales operations through configurable business validations, automated stage transitions, PDF proposal generation, email notifications, and Salesforce integrations, improving sales visibility, operational efficiency, and customer engagement

Responsibilities:

- Performed **Functional, Integration, Smoke, Regression, System, and UAT testing** for Salesforce Sales Cloud applications.
- Validated complete **SPANCO sales lifecycle** including Opportunity creation, DSR activities, Proposal generation, Quote management, Customer Approval, and Release Order (RO) processing.
- Tested Salesforce **Account, Contact, Opportunity, Quote, Order, Activities, Approval Process, Reports, and Custom Objects**.
- Verified business validations including mandatory fields, stage transitions, approval workflows, deal amount calculations, parent-child account validations, and date validations. • Validated **On-Screen and Off-Screen Proposal** workflows, inventory selection, deliverable summaries, quotation generation, and PDF creation.
- Tested automated **Proposal Email notifications**, customer contact management, and internal approval processes.
- Performed end-to-end validation of **Release Order (RO)** creation, RO Caption (ROC), inventory allocation, and business rule validations.
- Validated Salesforce integrations between custom objects, proposal management, inventory modules, and RO processing.
- Designed, executed, and maintained **manual and automation test cases**, regression suites, and test data for Agile sprint releases.
- Logged, tracked, and retested defects using **JIRA**, participated in defect triage meetings, sprint planning, requirement analysis, and release validation with Business Analysts and Developers.

Environment: Salesforce Sales Cloud, Salesforce Lightning Experience, Playwright, JIRA, Git, Jenkins, Postman, SQL, Agile Scrum

Client: Fujifilm India Pvt. Ltd.

Project-3: Fujifilm Skill Club

Description: Fujifilm Skill Club is a web and mobile-based learning platform designed for healthcare professionals, administrators, and business representatives. The application provides role-based access to training modules, certifications, medical product knowledge, assessments, and industry insights, enabling users to enhance their professional skills through an interactive digital learning experience.

Responsibilities:

- Developed and maintained scalable automation frameworks using **Playwright (JavaScript)** for web application testing and **Appium with Selenium WebDriver (Java)** for Android and iOS mobile application testing.
- Automated end-to-end user journeys including **user registration, login, role-based access, training enrollment, course completion, assessments, certifications, and profile management** across web and mobile platforms.
- Designed reusable automation components following the **Page Object Model (POM)** to improve test maintainability, scalability, and execution efficiency.
- Executed **Functional, Regression, Smoke, Integration, Cross-Browser, Cross-Platform, and End-to-End testing** for both web and mobile applications.
- Automated native and hybrid mobile application testing using **Appium Inspector, Appium Server, Android Emulator, and real devices**, validating application behavior across multiple Android and iOS versions.

- Developed Selenium-based automation scripts integrated with Appium to validate mobile application workflows, UI elements, gestures, synchronization, and navigation.
- Validated REST APIs using **Playwright API testing**, request/response assertions, and backend **SQL** verification to ensure data consistency between frontend and backend systems.
- Leveraged **Generative AI and AI-assisted testing** to generate test cases, create automation scripts, prepare test data, analyze requirements, and improve overall test coverage.
- Collaborated closely with Developers, Business Analysts, and Product Owners to analyze requirements, troubleshoot automation failures, perform root cause analysis, and validate production defects.
- Integrated Playwright and Appium automation suites into **Jenkins CI/CD** pipelines for continuous regression testing and faster release validation.
- Managed defect reporting, execution summaries, test metrics, and traceability using **JIRA**, while actively participating in Agile ceremonies including sprint planning, backlog refinement, daily stand-ups, and retrospectives.

Environment: Playwright, JavaScript, Appium, Selenium WebDriver, Java, Appium Inspector, Appium Server, Android Studio, Android Emulator, iOS Simulator, REST APIs, SQL, Jenkins, JIRA, Git, Agile Scrum.

Senior Quality Analyst – Ascendion Inc., Bangalore (Jan 2026 – April 2026)

Client: SunLife Global Solutions – Gurugram (On-site)

Project-1: Digital Toolkit Program – Sun Life Financial Distribution

Description: ServiceNow-based Digital Toolkit Platform that automated employee onboarding, role-based device provisioning, software and application requests, add-on management, and approval workflows through the Service Catalog. The platform streamlined IT service fulfillment, improved request processing efficiency, and ensured standardized access management across business users.

Responsibilities:

- Designed and developed scalable automation test cases using **Tricentis Tosca** for **ServiceNow ITSM** and **Service Catalog** workflows.
- Validated end-to-end **Service Request** lifecycle including catalog item requests, approvals, fulfillment, provisioning, and request closure.
- Tested **role-based provisioning** for laptops, virtual machines, software applications, security groups, and business add-ons based on user roles and access policies.
- Performed Functional, Regression, Smoke, Integration, and End-to-End testing for ServiceNow digital fulfillment workflows.
- Verified business rules, approval workflows, SLA validations, notifications, assignment groups, and request routing.
- Built reusable Tosca automation modules and reusable test components to improve automation coverage, maintainability, and execution efficiency.
- Utilized **AI-assisted testing** to accelerate test case design, requirement analysis, test data preparation, and documentation.
- Executed automation suites, analyzed failures, performed root cause analysis, and enhanced framework stability.
- Managed test execution, defect tracking, requirements traceability, and reporting using **qTest**, collaborating closely with Business Analysts, Developers, and Product Owners throughout Agile

sprint cycles.

- Participated in requirement reviews, sprint planning, defect triage, UAT support, and release validation to ensure successful production deployments.

Environment: ServiceNow ITSM, Service Catalog, Tricentis Tosca, qTest, JIRA, Agile Scrum, AI-assisted Testing

Software Test Engineer – Biz Secure Labs Pvt. Ltd., Pune (Aug 2021 – July 2025)

Project-1: End Point Management

Description: End Point Management is a cross-platform enterprise application for software deployment, device management, policy enforcement, and centralized monitoring of endpoints across Windows and web environments.

Responsibilities:

- Designed and developed automated test suites using **Selenium WebDriver, Java, TestNG, and Maven** for functional, regression, smoke, and end-to-end testing.
- Built and maintained reusable automation frameworks to improve test coverage, scalability, and execution efficiency.
- Leveraged **Generative AI and prompt engineering** to accelerate test case design, generate test data, optimize automation scripts, and identify edge-case scenarios.
- Integrated automation suites with **Jenkins CI/CD** for continuous testing and faster feedback on application builds.
- Collaborated with developers, business analysts, and product owners to analyse requirements, prioritize testing activities, and validate complex business workflows.
- Investigated automation failures, performed **root cause analysis**, and tracked defects using **JIRA** until closure.
- Created detailed test execution reports, defect metrics, and testing documentation in **Confluence**.
- Participated in Agile ceremonies, sprint planning, backlog refinement, and continuous process improvement initiatives.

Environment: Selenium WebDriver, Java, TestNG, Maven, Jenkins, Postman, MySQL, Git, JIRA, Confluence, Agile Scrum, AI-assisted Testing

Project-2: IT Desk Ticketing System

Description: IT Desk Ticket System is an enterprise Desktop and web-based support system for managing IT service requests and tracking issue resolution lifecycle.

Responsibilities:

- Developed and maintained robust automation frameworks using **Playwright and JavaScript** for functional, regression, and end-to-end testing.
- Automated ticket lifecycle validation, SLA workflows, email notifications, and business process verification.
- Utilized AI-assisted testing to generate test scenarios, improve test coverage, create realistic test data, and accelerate requirement analysis.
- Performed cross-browser testing across **Chromium, Firefox, and WebKit** to ensure application

compatibility.

- Validated **REST APIs** using **Playwright** network interception (route), request/response assertions, and backend **SQL** verification.
- Integrated **Playwright** test suites into Jenkins CI/CD pipelines to enable continuous quality validation.
- Collaborated with cross-functional teams to analyze defects, troubleshoot failures, and improve release quality.
- Prepared comprehensive execution reports, defect summaries, and testing metrics while contributing to Agile process improvements.

Environment: Playwright (JavaScript), Jenkins, Postman, SQL, MySQL, Git, JIRA, Agile Scrum, AI-assisted Testing

CERTIFICATIONS

- ISTQB Certified Tester - Foundation Level (CTFL)
- Generative AI Foundation Certification - up Grad
- Tricentis Tosca – Automating web application testing (AS1, AS2, AE1)
- Cypress Automation – Infosys Springboard
- SDET Certification – SEED Infotech, Pune

EDUCATION

- Bachelor of Engineering (B.E.) – Computer Science & Engineering, RGTU, Bhopal
- Senior Secondary (12th) – Om Vidya Mandir H.S. School, Bhopal – State Board
- Secondary (10th) – Om Vidya Mandir H.S. School, Bhopal – State Board
